

Design

If anyone could build a golf course, we would all have them in our backyards, because golf is fun. However, as seen in the previous section, navigating the journey to the end goal – a successful, beautiful golf course that would bring people back for more – could be a treacherous endeavor.

*Surrounding yourself in that dream by a focused team of skilled professionals, like **Professional Turf Maintenance**, can ensure that the dream does not become a nightmare. Our team will be aware of all the steps from selecting the right location right down to preventing disasters like building a course on an ancient burial site. The team is able to provide answers to your every question, and find solutions for hurdles along the way.*

Although it might seem more cost effective to try and do all the research and planning on your own, there are so many things to consider that it is virtually impossible. Experience is essential and can make or break your dream. Our 120 years of experience will prevent this from happening to you.

One of the most important people on the team would be a project manager that understands your dream and shares your visions. The project manager will overview your initial planning, and ensure that all necessary professionals have been contacted. Again, doing your homework will be important when

**A quality team
makes a quality
design a reality...**

*selecting a team. Research our skills, our experience and ask for information on previous projects. Once you are satisfied that **Professional Turf Maintenance** is your team, we'll be spending a lot of time together (construction takes about two years, excluding design and permitting), and you will be with a team that you can communicate with and address concerns with, before they become problems. Don't be scared to ask questions. **Professional Turf Maintenance** will set up schedules for meetings about all aspects of the project.*

A quality team would ensure a top design and ultimately guide you through the journey to the dream.

PLANNING

- Project Manager
- Financial Consultant
- Project Engineer
- Land Planner
- Civil Engineer
- Hazardous Waste Engineer
- Traffic Engineer
- Geotechnical Engineer
- Environmental Scientist
- Golf Course Architect
- Landscape Architect
- Clubhouse Architect
